

NVQI-QOD: Now Expanding into Canada

Bridging North American Data for Superior Neurovascular Outcomes

The NVQI-QOD is a physician-led registry developed to improve procedural quality and patient care for those with stroke and cerebrovascular diseases.

In 2026, we are expanding our reach into Canada, enabling Canadian centers to join a robust network of top medical centers in North America to achieve higher quality care through validated, real-world data.

Why Join the North American Standard?

Benchmarking & Long-Term Outcomes

Compare technical efficacy and clinical outcomes against aggregate national benchmarks from top centers. The registry captures 100% of procedures, demographics, and long-term patient outcomes (one year or longer) for detailed safety analysis.

Cutting-Edge 2026 Modules

Access the latest innovations, including the brand-new Cerebral Venous module and an expanded Neuro Embolization module.

Secure Infrastructure & Regulatory Compliance

Utilize the secure, web-based Fivos PATHWAYS platform for data sharing and receive essential assistance in meeting regulatory demands for clinical follow-up.

Core Modules for 2026

The registry supports a wide range of neurointerventional and cerebrovascular surgical procedures:

- ✓ Acute Ischemic Stroke
- ✓ Cerebral Aneurysm
- ✓ Cerebral Venous (New for 2026)
- ✓ Neuro Embolization (Expanded for 2026)

Note on Service Availability

NVQI-QOD services and participation are subject to individual provincial restrictions. Currently, services are not available in the province of Quebec.

ABOUT NVQI-QOD

NVQI-QOD is uniquely focused on neurovascular care providing real-time actionable data, comparable metrics and data on device effectiveness.
